

- Public Services: Fix Systems People Depend On

MedClear

The AI-Powered Hospital Charity Care Navigator.

Turning 50-page legal PDFs into instant, verifiable financial relief.

THE PROBLEM

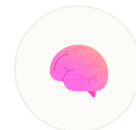

Help is Buried.

Medical debt is the leading cause of bankruptcy. Yet, non-profit hospitals are legally required to offer Financial Assistance. Why don't people use it?

Dense Jargon

Policies are buried in 50+ page PDFs filled with dense, impossible-to-read legal formatting.

High Cognitive Load

Vulnerable patients in medical distress are forced to do complex Federal Poverty Level math.

System Friction

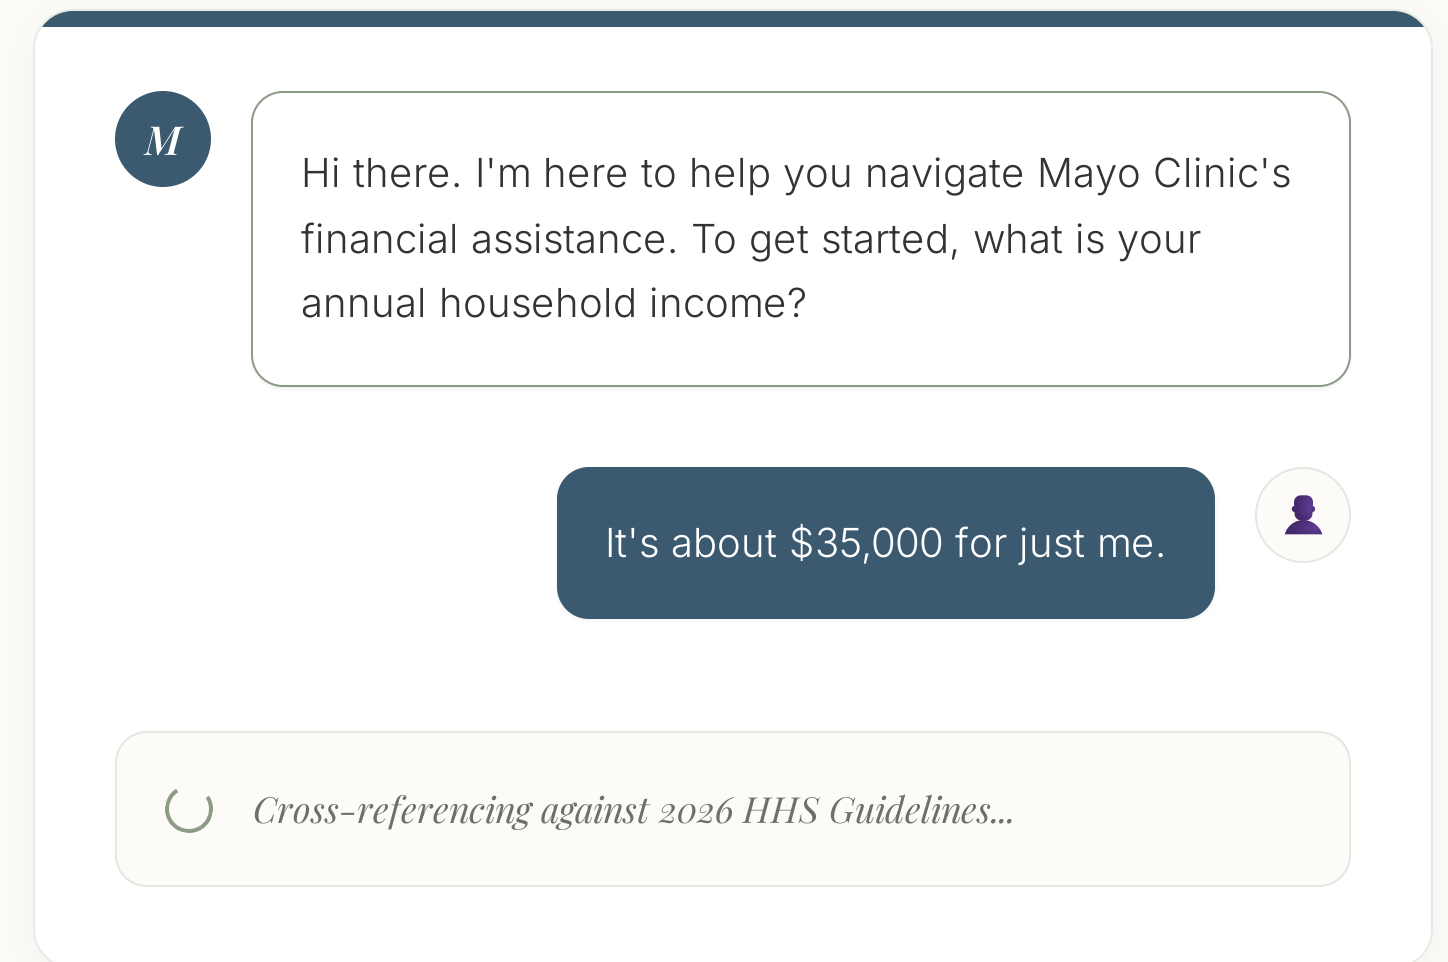

Because the system is too confusing to navigate, patients simply give up and take on crushing debt.

THE SOLUTION

A Calming Navigator.

MedClear abstracts away all complexity. Users simply input their income and household size, and our Eligibility Engine instantly cross-references the official hospital policy.

- Empathetic Wizard Interface
- Instant OCR Bill Parsing
- Completely Private & Ephemeral

Verifiable RAG Engine.

1. The Inputs

User's Income & Household

2026 HHS Poverty Guidelines

15,000 char Official Policy PDF

2. Processing

Llama 3.3 70B

Strictly constrained system prompt forces the LLM to parse the policy and classify the income tier.

3. The Outputs

```
{  
  "eligible": true,  
  "quote": "Patients under 250% FPL receive  
100% discount."  
}
```

Isolating Math from Hallucinations.

The Risk

In a legal healthcare context, it is catastrophic to have an AI "guess" or hallucinate a user's eligibility math, giving false hope.

The Mitigation

We strictly isolate the AI to text-parsing. The actual Federal Poverty Level (FPL) calculation is performed deterministically by hardcoded Python logic.

backend/main.py

```
# Deterministic Python Math (NO AI)

def run_rag_evaluation(hospital, income, household):
    base_fpl = 15960
    per_person = 5680
    fpl_100 = base_fpl + (per_person * (household - 1))
    fpl_percentage = (income / fpl_100) * 100

# Inject verified FPL into prompt

prompt = f"Patient FPL: {fpl_percentage}%"
```

Decision Impact.

The AI does not make the final decision.

MedClear is a navigational aid. It does not submit or formally approve the application. Instead, we empower the patient by providing them with the exact source documents and eligibility proof.

Result: Empowered Action

The patient prints out the verified quote and walks into the human billing department with confidence, turning confusion into clarity and action.
